

300 cable tray size

Article Overview

A 300mm cable tray typically features a 300mm width, heavy-duty construction, and compliance with BS 61537:2007 standards, suitable for supporting electrical and data cables.

Dimensions and Construction

A standard 300mm cable tray, such as the Unitrunk KLHR300T, has a width of 300mm, a height of 50mm, and a length of 3 meters per straight section . These trays are generally made from pre-galvanized steel, providing durability and corrosion resistance. Other materials may include stainless steel (AISI 316L) or aluminum, depending on environmental requirements . Wire mesh trays often feature Safe-T-Edge designs to prevent cable fraying and protect installers from sharp edges .

Standards and Compliance

300mm cable trays are designed in accordance with BS 61537:2007, which governs cable tray systems for electrical installations . They may also comply with NEMA VE-1, CSA C22.2 No.126, and RoHS Directive 2011/65/EU for material safety . CE marking indicates compliance with European directives, and third-party certifications (UL, IMQ, LCIE) ensure quality and safety .
