

Are 12-core and 4-core fiber optic cables the same price

Article Overview

12-core fiber optic cables are generally more expensive than 4-core cables due to the higher number of strands.

Cost Factors

The price of fiber optic cables depends on several factors, including fiber count, type (single-mode or multimode), cable construction, and environmental rating . Specifically, higher core counts increase material costs proportionally. For example, a 12-strand cable typically costs around \$0.50 per foot, while a 4-strand cable would be significantly cheaper, reflecting fewer fibers and simpler manufacturing . Other factors influencing cost include:

- Fiber type: Single-mode fibers are slightly cheaper per foot than multimode fibers but require more expensive transceivers .
- Cable construction: Armored or plenum-rated cables designed for harsh environments or indoor air-handling spaces cost more .
- Installation environment: Underground or outdoor installations add to total project costs compared to indoor runs .

Practical Implications

While a 12-core cable has a higher upfront cost, it provides greater scalability for future network expansion, reducing the need to replace cables later . In contrast, a...
