

Complete Guide to Cable Tray Construction Diagrams

Article Overview

Cable tray diagrams and CAD models are available for ladder, ventilated, solid-bottom, and wire-mesh trays, with detailed technical guides and 3D models for design and installation.

Types of Cable Trays and Diagrams

1. Ladder Trays Ladder trays consist of two side rails connected by rungs, providing strong mechanical support and allowing air circulation around cables. They are ideal for long cable runs and heavy-duty applications. Diagrams typically show side views, top views, and cross-sections, including rung spacing, tray width, and support locations. Hubbell's NEXTFRAME® Ladder Tray guide provides detailed diagrams for installation along floors, walls, ceilings, and equipment racks, including modular configurations and load class specifications . 2. Ventilated and Solid-Bottom Trays Ventilated trays have perforated bottoms to allow heat dissipation, while solid-bottom trays protect cables from dust and debris. Technical guides from ABB and Legrand include diagrams showing tray dimensions, bend radii, and cover options, as well as installation details for instrumentation and control cables . 3. Wire-Mesh or Channel Trays Wire-mesh trays are made of welded steel wire and are used for light cables or where flexibility is required. Diagrams illustrate mesh spacing, support points, and routing options. Channel trays are often used for aesthetic applications or short runs to devices, with diagrams showing cross-sections and mounting details .
