

Connect the switch s optical port to a 100Mbps Ethernet port

Article Overview

You can connect a switch's optical port to a 100Mbps Ethernet port using an SFP copper (RJ45) module that converts the optical interface to an electrical Ethernet interface.

Understanding the Port Types

- **Optical (SFP) Ports:** These ports are modular and designed to accept optical transceivers for fiber connections. They cannot directly connect to copper Ethernet cables without a conversion module .
- **Ethernet (RJ45) Ports:** Standard copper ports that support 10/100/1000 Mbps speeds and use twisted-pair cables (Cat5/Cat6) for data transmission .

Directly connecting an optical port to a 100Mbps Ethernet port is not possible because the optical port transmits light signals, while the Ethernet port transmits electrical signals. A conversion is required.

Using an SFP Copper Module

- **Select a Compatible SFP Copper Module:** Use a Gigabit electrical SFP module (also called a Copper-T module) that fits into the switch's SFP slot. This module converts the optical port into a standard RJ45 Ethernet interface .
- **Insert the Module:** Plug the SFP copper module into the switch's optical port. Ensure it is fully seated and recognized by the switch.
- **Connect the Ethernet Cable:** Use a Cat5 or Cat6 cable to connect the RJ45 port on...
