

Core Switch Fiber Port 16

Article Overview

A 16-port fiber core switch typically combines RJ45 and SFP/SFP+ fiber ports, supports L2/L3 management, VLANs, QoS, and redundancy protocols for reliable high-speed network connectivity.

Overview

A 16-port fiber core switch is designed for high-density network environments, providing both fiber and copper connectivity. Common configurations include:

- 8 RJ45 Gigabit ports + 8 SFP fiber ports (e.g., BP-SWM8G8F01) or
- 12 RJ45 Gigabit ports + 4 SFP+ 1/10G fiber uplinks (e.g., ONV38168FM) or
- 8 RJ45 + 4 SFP + 4 SFP+ uplinks (e.g., ONV56168FM) Each port supports wire-speed forwarding, ensuring minimal latency and high throughput for core or aggregation layers in enterprise networks .

Key Features

- L2/L3 Management: Supports IPv4/IPv6, static and dynamic routing, ACLs, QoS policies, and VLAN segmentation for efficient traffic management .
- Redundancy Protocols: STP, RSTP, MSTP (
