

Delivery period for armored high-voltage complete sets of equipment

Article Overview

The delivery period for armored high-voltage complete sets of equipment typically ranges from 12 to 36 weeks, depending on equipment type, customization, regulatory compliance, and installation requirements.

Typical Delivery Timeline

- **Standard Equipment:** For pre-designed armored switchgear or transformer sets, delivery usually takes 12–20 weeks from order confirmation, including manufacturing, factory testing, and shipment preparation .
- **Customized or Complex Systems:** Fully tailored high-voltage systems, including gas-insulated switchgear (GIS) or hybrid switchgear with integrated protection and control panels, may require 24–36 weeks due to design, engineering, and extended factory acceptance testing .
- **Regulatory Compliance:** Equipment intended for the Eurasian Economic Union (EAEU) or European markets must comply with technical regulations such as TR EAEU “On Safety of High Voltage Equipment” or EU directives. Conformity assessment, certification, and testing can add 4–8 weeks to the delivery period .

Factors Affecting Delivery

- **Production Capacity:** Lead times depend on the manufacturer's current workload and availability of critical components like circuit breakers, transformers, and control panels .
- **Testing and Quality Assurance:** High-voltage equipment undergoes rigorous factor...
