

Dimensions of a two-circuit distribution box

Article Overview

A 2-circuit distribution box is compact, typically designed to house two protective devices, with a footprint small enough for wall mounting in garages, small outbuildings, or as a sub-board.

Typical Dimensions

A 2-circuit (2-way) distribution board is the most basic configuration of a consumer unit. While exact dimensions vary by manufacturer, these boxes are generally hand-sized units with a compact footprint to save space in low-demand applications . Common external dimensions for small wall-mounted enclosures range from approximately 200 × 200 × 120 mm (height × width × depth) up to slightly larger sizes depending on the brand and IP rating . The internal space is sufficient to accommodate two circuit breakers or fuses, along with wiring clearance.

Applications

2-way distribution boxes are often used for:

- Small outbuildings or garages
- Dedicated high-power circuits (e.g., immersion heaters or cookers) alongside a general lighting circuit
- Sub-main boards feeding another distribution board in a larger installation...
