

Distance between distribution box and ground installation

Overview

The standard height for installing a distribution box is 1.5 meters (5 feet) from the ground, providing comfort and safety for most people. Industrial settings may require a higher height. According to the "Code for Acceptance of Construction Quality of Building Electrical Engineering" GB50303-2002, the vertical distance between the bottom surface of the fixed stainless steel enclosure IP67 and the ground should be greater than 1. The bottom surface. Outdoor boxes need to be at least 3 feet above the ground. Generally, distribution boxes can be divided into three levels of secondary protection, that is, three levels of distribution boxes: general. Power from factory ground must be installed by a qualified electrician. Whether in a home or an industrial facility, this box keeps your electrical setup organized, functional, and efficient.
