

Duplex Couplers and Fiber Optic Couplers

Article Overview

Fiber optic couplers are devices that split or combine optical signals, while duplex couplers specifically connect two fiber pairs for bidirectional communication.

Fiber Optic Couplers

Fiber optic couplers are essential components in optical networks that split a single optical signal into multiple outputs or combine multiple signals into one without significant signal loss (). They operate based on optical physics principles and are designed to ensure minimal insertion loss and optimal light transfer. Common types include:

- Fused Biconical Taper (FBT) Couplers: Created by fusing and tapering two fibers together, offering flexible coupling ratios and cost-effective performance ().
- Planar Lightwave Circuit (PLC) Couplers: Use silica optical waveguides to split light evenly with low insertion loss, ideal for precise signal distribution ().
- Wavelength-Division Multiplexing (WDM) Couplers: Combine or separate signals based on wavelength, expanding network capacity ().
- Star/Tree Couplers: Suitable for complex data distribution networks (). Applications include telecom networks, data communication systems, fiber sensors, and signal distribution across multiple locations ().

Duplex Couplers

Duplex couplers are a specialized type of fiber optic coupler that connect two fiber optic pairs, enabling bidirectional transmission or reception (). They are commonly...
