

European-style cable tray support

Article Overview

European cable tray supports are modular systems designed to safely route, support, and organize electrical cables in industrial, commercial, and civil installations, complying with standards like DIN EN 61537.

Overview

Cable tray supports in Europe are engineered to carry and secure electrical cables efficiently while allowing easy maintenance and expansion. They are widely used in data centers, industrial plants, marine environments, and commercial buildings. These systems include cable trays, ladders, mesh trays, mounting brackets, and accessories to accommodate various cable types and loads .

Types of Cable Tray Supports

- Cable Ladders: Open structures ideal for heavy cables and high heat dissipation. Suitable for industrial and hygienic environments .
- Perforated Cable Trays: Solid base with holes for ventilation, reducing overheating risks and supporting medium to heavy loads .
- Mesh Trays: Flexible, lightweight, and easy to cut, ideal for complex routing and retrofit projects .
- NATO-type and Distribution Trays: Specialized trays for military or industrial applications requiring robust and standardized solutions .

Materials and Finishes

European cable tray supports are typically made from steel or stainless steel, with h...
