

Fiber Optic Cable lc

Article Overview

LC (Lucent Connector) fiber optic cables are compact, high-density connectors widely used in modern networking for reliable, low-loss optical transmission.

Overview of LC Connectors

LC stands for Lucent Connector, originally developed by Lucent Technologies for telecommunications applications . It features a small form factor, roughly half the size of SC connectors, making it ideal for high-density installations in data centers and telecom networks . The connector uses a 1.25 mm ferrule and a push-pull latch mechanism, allowing easy insertion and removal without twisting or tools . LC connectors conform to TIA/EIA 604 standards, ensuring precise fiber alignment and low insertion loss .

Key Features

- **Compact Design:** Half the size of SC connectors, suitable for high-density panels and transceivers .
- **Low Insertion Loss:** Standard LC cables maintain ≤ 0.3 dB, while ultra low loss versions can achieve 0.12 dB .
- **High Reliability:** Supports multiple mating cycles with minimal signal degradation .
- **Versatility:** Available in single-mode (OS1/OS2) and multimode (OM1/OM2/OM3/OM4/OM5), as well as simplex, duplex, uniboot, and armored variants .
