

Fiber Optic Communication Company in Angola

Article Overview

Angola's fiber optic network combines domestic terrestrial backbones and international submarine cables, forming a critical foundation for national broadband and global connectivity.

Domestic Fiber Optic Infrastructure

Angola has developed an extensive terrestrial fiber optic backbone connecting all 18 provincial capitals and major municipal seats, totaling approximately 25,000 kilometers . The network follows a hub-and-spoke pattern radiating from Luanda, with primary routes along the coast, eastern corridor to diamond-producing provinces, and central corridor along the historic Benguela Railway . Key operators include Angola Telecom, which controls most backbone fiber, MS Telecom for metro and intercity routes, and Multitel, a joint venture maintaining enterprise-grade fiber in Luanda and select provincial capitals . Private operators like TV Cabo and Net One provide urban broadband services. The National Broadband Network project adds 1,980 kilometers of new fiber to reach underserved communities, potentially connecting 3 million additional Angolans . This expansion is part of the Plano Nacional de Desenvolvimento 2023-2027, aiming for 60% broadband penetration by 2027, up from 25% in 2023 . Funding comes from the World Bank, national budget allocations, Chinese credit lines, and private co-investments .
