

Fiber Optic Distribution Box Assembly

Article Overview

Assembling a fiber optic distribution box involves mounting the box, introducing and securing fiber cables, routing fibers through splice trays, and terminating connections with adapters while ensuring proper bend radius and cable management.

Step 1: Preparing and Mounting the Distribution Box

Before assembly, select an appropriate installation site considering accessibility, cable routing, and environmental conditions . Mount the distribution box securely on a wall or rack using brackets and screws, ensuring it is level and aligned . Determine the installation orientation to allow easy access to the front panel and splice trays. For rack-mounted boxes, attach the brackets to the designated rack position and verify stability .

Step 2: Introducing Fiber Optic Cables

Feed the fiber optic cables into the box through the designated cable inlet holes. Use grommets to protect the cable jacket and secure the cable in place . Measure and mark the cable length to ensure sufficient slack for the front panel to be fully extended without tension on the fibers . Strip the cable jacket carefully at the marked point, remove aramid fibers, and wrap the cable with electrical tape where clamps will secure it .

Step 3: Routing Fibers and Splice Tray Management

Open the splice tray by unclipping it and removing any cable tie-downs . Route the...
