

Fiber Optic Patch Cord Round

Article Overview

A square-to-round fiber optic patch cord connects a square connector to a round fiber cable, enabling flexible integration between different fiber types and equipment.

Overview

A fiber optic patch cord is a cable terminated with connectors at both ends, used to link fiber optic devices for high-speed data transmission . A square-to-round patch cord specifically adapts a square connector interface (like LC, SC, or ST) to a round cable, which is often used in ruggedized or high-density installations . This design allows seamless connection between standard patch panels and round fiber cables with strain relief and protective jackets.

Key Features

- **Connector Types:** Common square connectors include LC, SC, and ST, while the round cable end may be 1.6 mm or 2.0 mm in diameter .
- **Cable Construction:** Round cables typically have a ruggedized jacket and internal strain relief to protect the fiber during handling and installation .
- **Lengths:** Available in various lengths, typically from 1 meter up to 100 meters, depending on installation needs .
- **Fiber Types:** Supports both single-mode (SM, OS1/OS2) and multimode (MM: OM1-OM5) fibers, including bend-insensitive variants for tight spaces .
- **Applications:** Ideal for FTTH, data centers, optical distribution frames, and high-speed network connections where square connectors need to interface with round cables
