

Fiber Optic Router Pairing Steps

Article Overview

To pair a router with a fiber optic connection, you need an Optical Network Terminal (ONT) to convert the fiber signal, then connect it to a compatible router via Ethernet.

Required Equipment

- Optical Network Terminal (ONT): Converts incoming fiber optic light signals into electrical signals your router can use, usually provided by your ISP .
- Fiber Optic Cable: Connects the wall outlet to the ONT, typically with SC/APC or SC/UPC connectors .
- Ethernet Cable: Links the ONT to your router's WAN port .
- Fiber-Compatible Router: Ensure it supports gigabit speeds or higher to fully utilize fiber internet .

Step-by-Step Setup

- Locate the Fiber Outlet: Identify where the fiber line enters your home.
- Connect Fiber to ONT: Plug the fiber optic cable into the ONT's optical port, handling connectors carefully to avoid damage .
- Power the ONT: Use the provided adapter and wait for the status lights to stabilize (usually 2-5 minutes), .
- Link ONT to Router: Connect an Ethernet cable from the ONT's LAN port to the router's WAN port .
- Power the Router: Turn on the router and wait for indicator lights to confirm a successful connection .
