

Fiber Optic Switch ZoneLun

Overview

Similar to the VLAN function of an Ethernet switch, the zoning function of a Fibre Channel switch allows users to isolate links, thereby reducing fault domains and link contention between hosts or applications. Various port sizes are available ranging from 4 up to 52 ports. We offer solutions that provide seamless transmission and conversion. Discover fiber switches designed for reliable network connectivity. Fiber optic switches, multiplexers and demultiplexers block or route optical signals in a fiber optic network. 2 dB), fastest switching speed (10 ns), broadest wavelength range (300–2400 nm), widest fiber compatibility, highest optical power handling (50 W), and space-qualified reliability. This is especially important for fabrics having a very high device count. Whenever possible, peer zones are.
