

Fiber Tail Stripping Tools

Article Overview

Tail fibers are stripped using mechanical, thermal, or automated fiber strippers designed to remove coatings cleanly without damaging the glass core.

Mechanical Fiber Strippers

Mechanical strippers are handheld tools with precision slots that match the fiber diameter. They remove coatings by clamping and sliding the coating off the fiber end. Common types include:

- FOS03 Fiber Strippers: Remove primary and secondary coatings by pressing through the coating and sliding it off the fiber end, suitable for 125 μm glass fibers with 250 μm coatings .
- CFS-2 Fiber Cable Cutting Scissors: Three-hole strippers that can handle multiple coating layers and outer sheaths, allowing quick and accurate stripping without damaging the fiber .
- RCS-0425 Fiber Cable Stripper: Adjustable depth strippers for larger insulation layers, useful for specialty fibers .

Thermal Fiber Strippers

Thermal strippers use controlled heat to soften or vaporize the coating, allowing gentle removal:

- Handheld thermal strippers: Adjustable temperature and time settings for precise buffer removal
