

Fiber distribution box optical cable

Article Overview

A Fiber Distribution Box (FDB) is a protective enclosure that organizes, terminates, and distributes optical fibers in both indoor and outdoor networks.

Purpose and Function

A Fiber Distribution Box serves as a central point for managing optical fibers, enabling termination, splicing, and distribution of fiber optic cables. It ensures proper organization of incoming and outgoing fibers, maintains bend radius control, and provides strain relief to preserve signal quality . FDBs are essential in FTTH (Fiber-to-the-Home), FTTx, and other optical networks, facilitating connections between the main distribution network and end users .

Construction and Materials

These boxes are typically made from high-strength engineering plastics or weather-resistant metals, offering UV resistance, anti-aging properties, and durability for long-term use . Outdoor models are designed to be dustproof, waterproof, and impact-resistant, ensuring protection against harsh environmental conditions .

Key Features

- **Splice Protection:** Includes splice trays or cassettes to secure fiber splices and prevent damage .
- **Fiber Storage:** Provides slack storage areas for excess fiber, often color-coded for easy identification
