

Fiber optic connection to West Asia Branch

Article Overview

Currently, there is no widely reported submarine fiber optic cable directly connecting West Asia to other continents, but the region is served by multiple international and regional undersea and terrestrial networks.

Overview of West Asia Fiber Connectivity

West Asia, encompassing countries like Saudi Arabia, UAE, Qatar, Oman, and Iran, relies on a combination of submarine cables and terrestrial fiber networks to connect globally. While major Asia-Pacific cables like NCP and Bifrost link East and Southeast Asia to North America, West Asia primarily connects through:

- Submarine cables in the Persian Gulf and Red Sea, such as FALCON, Gulf Bridge International (GBI), and SeaMeWe series, which link West Asia to Europe, South Asia, and East Africa.
- Terrestrial fiber networks across the Middle East, connecting countries internally and providing redundancy for international traffic.

Key Submarine Systems Serving West Asia

- SeaMeWe (South-East Asia-Middle East-Western Europe) Series
- Connects multiple West Asian countries to Europe and Southeast Asia.
- Provides high-capacity DWDM transmission for international data traffic.
- Gulf Bridge International (GBI) Network...
