

Fiber optic network interface card wavelength division multiplexing

Overview

DWDM is an optical multiplexing technology that increases the bandwidth of existing fiber optic backbones. The "basie" transmission rate of SONET is 64 kbps for supporting voice communications. SONET multiplexes large numbers of 64-kbps channels onto higher-rate datastreams. SONET defines a. This chapter provides an overview of dense wavelength division multiplexing (DWDM) systems. The following topics are covered in this chapter: • Time Division Multiplexing Versus Wave Division Multiplexing • Wavelength Division Multiplexing Versus Dense Wavelength Division Multiplexing • Value of. With the software RP Fiber Power one can simulate how channel powers evolve in a system, how cross-talk arises from nonlinear interactions, etc.
