

Fiber optic switch array wiring price

Article Overview

Fiber optic array wiring costs vary widely, typically ranging from \$1 to \$6 per foot for standard cables, with custom fiber array units costing significantly more depending on precision, fiber count, and connectors.

Standard Fiber Optic Cable Costs

The price of fiber optic cables depends on fiber type, strand count, and installation environment. Retail prices for standard cables range from \$1 to \$6 per linear foot, with single-mode fiber generally cheaper than multimode fiber, though single-mode requires more expensive equipment for termination and testing . Wholesale bulk purchases can reduce material costs to \$0.09–\$1.52 per foot. High-strand-count cables, such as 288-strand backbone cables, can reach the upper end of this range . Installation costs add significantly to the total price. Indoor runs are less expensive, while outdoor or underground installations require trenching, conduit, and permits, increasing labor costs. Typical labor rates range from \$75 to \$180 per hour, with total labor consuming 8–40 hours depending on run length and complexity . For example, a 5,000-foot outdoor armored cable run with multiple splices and professional testing can cost \$15,000–\$20,000 including materials, labor, and permits .

Fiber Array Units (FAUs)

A fiber array is a rigid assembly of multiple optical fibers held in precise geometric alignment, often used for photonic integrated circuits, optical splitters, or high-density datacom switches . Unlike standard loose fiber bundles, FAUs require micron or sub-micron positional accuracy, which increases cost. Pricing depends on:...
