

Fire Efficiency Classification of Cables and Optical Fibers

Overview

BS EN 50575 is a regulation which brings together common classification, criteria and monitoring requirements to form seven Euroclasses. These classes have fire performance assessment processes based on BS EN 60332-1-2, BS EN 50399 and BS EN ISO 1716. The purpose of a fire rating is not to improve transmission performance. Different environments. Corning Optical Communications manufactures quality flame retardant optical fiber cables for indoor applications, which comply with the requirements of the National Electric Code® (NEC® 2023) published by the National Fire Protection Agency (NFPA). The EU has approved New Approach Notified and Designated. In Europe, the Euroclass system provides a standardized classification for the fire behavior of cables in buildings. Based on the EN 50575:2014, it's part of the Construction Products Regulation (CPR) framework that enforces rigorous fire safety regulations. These cables can be tailored with additional features to suit their intended purpose, whether used for armored, aerial, or indoor distribution. For relevant cables, this means specifying CPR CE-marked products with a declared reaction-to-fire.
