

Fireproof Model Specifications for Distribution Boxes

Article Overview

Fireproof distribution boxes are designed to maintain circuit integrity during fire, using high-grade materials and certified fire-resistance standards such as DIN 4102, BS EN 50200, IEC 311, and UL 94-VO.

Key Specifications

Materials: Fireproof distribution boxes are typically constructed from steel, aluminum alloys, or high-temperature thermoplastics. Metal enclosures provide robust thermal and physical protection, while thermoplastics offer flame retardancy, electrical insulation, and lightweight handling for easier installation. Some models use halogen-free Duroplast to reduce smoke emissions during fire.

Fire Resistance Ratings:

- DIN 4102 Part 2 (F30/F90): Indicates fire resistance duration of 30 or 90 minutes for structural integrity.
 - DIN 4102 Part 12 (E30/E90): Ensures protection of internal electrical components for 30 or 90 minutes.
 - BS EN 50200 & BS 8434-2 (PH120): Specifies survival duration for fire performance cables, typically up to 950°C for hazardous areas.
 - IEC 311: Provides additional high-temperature testing up to 750°C for industrial applications.
 - UL 94-VO: Certifies flame retardancy for thermoplastic enclosures.
- Ingress Protection (IP) Ratings:**
- IP54: Protects against dust ingress and water splashes
