

Fireproof and waterproof cable trays are custom-made

Article Overview

Fireproof and waterproof cable trays are available as custom-made solutions to meet specific industrial and commercial requirements.

Customization and Materials

Cable trays designed to be fireproof and waterproof are often custom-engineered to suit the specific dimensions, load capacities, and environmental conditions of a project . Common materials include fiber-reinforced plastic (FRP), which offers corrosion resistance, fire retardance, and UV protection, and galvanized or stainless steel, which provides durability and water resistance . These trays can be tailored in width, height, thickness, and perforation patterns to accommodate different cable types and installation layouts .

Fire and Water Resistance

- **Fireproofing:** FRP trays can meet standards such as UL-94 and ASTM E84, ensuring they resist ignition and slow the spread of flames . Steel trays can also be treated or coated to enhance fire resistance .
- **Waterproofing:** Trays are designed to prevent water ingress, making them suitable for outdoor, industrial, or marine environments. Sealed or ventilated designs are available depending on the application .
