

# How big of a distribution box should be replaced

## Article Overview

The distribution box must be sized to handle the total electrical load with at least 20–30% extra space for future expansion, while also providing sufficient physical room for components and safe wiring.

### Electrical Capacity

When replacing a distribution box, the first consideration is electrical load. Calculate the total current demand of all circuits, including lighting, appliances, and specialized equipment. Each circuit should have its own breaker or fuse, and the box must accommodate the maximum expected current without exceeding its rated capacity . Include spare slots—typically 20–25% more than currently needed—to allow for future additions such as electric vehicle chargers, smart home modules, or additional circuits .

### Physical Dimensions

Physically, the box should provide enough space for all components, wiring, and proper ventilation. Modern distribution boxes often include circuit breakers, RCDs, surge protection, and other modules, so plan for neat cable routing and ergonomic arrangement . Ensure the enclosure is large enough to avoid overcrowding, which can cause overheating or make maintenance difficult . For example, if your calculated requirement is 18 slots, a 24- or 30-slot box may be appropriate ....
