

How long is one pole in a mesh cable tray

Article Overview

A standard section (or "pole") of a wire mesh cable tray is typically 3 meters (approximately 10 feet) long.

Standard Lengths

Wire mesh cable trays, also known as basket trays, are manufactured in modular sections to facilitate easy installation and field modifications. The most common standard length for one section is 3 meters (10 feet), although some manufacturers may offer shorter sections of 2 meters or longer sections up to 6 meters depending on project requirements and handling constraints. These sections are designed to be joined end-to-end using compatible fittings and connectors.

Other Relevant Dimensions

- Width: Standard widths range from 100 mm to 600 mm (4 to 24 inches), depending on cable volume and type.
- Height/Depth: Typically between 50 mm and 150 mm (2 to 6 inches), which affects load capacity and cable containment.
- Mesh Size: The grid spacing of the wire mesh usually ranges from 25 mm to 50 mm (1 to 2 inches), balancing ventilation and structural support.
- Wire Diameter: Wire thickness varies from 3 mm to 6 mm (0.12 to 0.24 inches), influencing the tray's load-bearing capacity.
