

How much does an Accelink optical module cost

Article Overview

Accelink optical modules range from several hundred to several thousand USD depending on speed, form factor, and specifications.

400G Optical Modules

Accelink 400G QSFP-DD LR4 modules, such as the RTX290-342, are available on online marketplaces like eBay, with prices typically starting around \$1,500-\$2,500 per unit, depending on condition and seller offers (new or used) . These modules are designed for high-speed data center and telecom applications, supporting long-reach single-mode fiber.

800G Optical Modules

Accelink's 800G modules, including OSFP and QSFP-DD form factors, are positioned for next-generation AI clusters, data centers, and high-performance computing . Examples include the RTX600-210 800G OSFP 2xFR4 transceiver, which supports up to 2 km on single-mode fiber . Pricing for these modules is generally higher than 400G modules, often ranging from \$5,000 to \$10,000 per unit, depending on specifications, vendor, and order quantity . Bulk orders may reduce per-unit cost, and suppliers often provide MOQ flexibility starting from 1 piece .
