

How to adjust the position of the light sensor module on the Equinox

Article Overview

The light sensor module on the 2026 Equinox is generally fixed and not designed for manual repositioning; adjustments should be performed by a qualified technician if needed.

Understanding the Light Sensor Module

The light sensor module in the Equinox is responsible for detecting ambient light levels to control features such as automatic headlights, interior lighting, and display brightness. It is typically located near the top of the windshield, behind the rearview mirror, and is calibrated at the factory to ensure accurate operation .

Why Manual Adjustment is Not Recommended

- The sensor is sensitive to alignment and calibration; improper repositioning can cause malfunction of automatic lighting systems.
- Modern vehicles, including the 2026 Equinox, often integrate the sensor with other systems like driver assistance cameras, so moving it may affect multiple functions.
- The owner manual does not provide instructions for manual adjustment, indicating that factory positioning is intended to remain fixed .

Recommended Actions

- Check for Obstructions: Ensure the windshield area in front of the sensor is clean and free of tint, stickers, or dirt that could interfere with light detection....
