

How to connect a fiber optic router to Wi-Fi

Article Overview

To connect a fiber optic router to Wi-Fi, you first link the fiber optic cable to an ONT, then connect the ONT to your router via Ethernet, and finally configure the router to broadcast a wireless network.

Step 1: Ensure Fiber Optic Service and Equipment

Confirm that fiber optic internet is available at your location and that you have the necessary equipment: an Optical Network Terminal (ONT) provided by your ISP, a compatible router with a WAN or SFP port, and the fiber optic cable itself (usually SC/APC or SC/UPC connectors) .

Step 2: Connect the Fiber Optic Cable

- Locate the fiber optic wall outlet where the ISP's fiber line enters your home.
- Plug one end of the fiber optic cable into the wall outlet and the other into the ONT's designated port.
- Power on the ONT and wait for the status lights to stabilize, which may take a few minutes .

Step 3: Link the ONT to Your Router

- Use an Ethernet cable to connect the ONT's Ethernet/LAN port to the WAN port on your router.
- Power on the router and wait for the indicator lights to confirm a successful connection
