

How to connect fiber optic cables to a fiber optic box

Article Overview

Connecting a fiber optic cable to a fiber optic box involves careful preparation, proper termination, and secure insertion to ensure optimal signal performance.

Tools and Safety

Before starting, gather the necessary tools: a fiber optic stripper to remove the outer jacket, a cleaver for precise fiber cuts, connectors (LC, SC, or FC), a fusion splicer or mechanical splice kit, and testing tools like an OTDR or optical power meter. Always wear gloves and safety glasses to protect against tiny glass shards from the fiber strands .

Step-by-Step Connection Process

- Mount the Fiber Optic Box
 - Position the box on the wall and mark screw holes using a level.
 - Drill pilot holes and insert anchors if needed.
 - Secure the box with screws, avoiding over-tightening, especially for plastic enclosures .
-
- Route the Fiber Cable
 - Feed the outdoor fiber drop through the grommet-sealed entry port.
 - Leave a 10-15 cm service loop inside the box for flexibility.
 - Secure the cable with internal clips to prevent tension or sharp bends
