

How to connect the network patch panel to the information box

Article Overview

To connect a network patch panel to an information box, terminate the incoming cables on the patch panel using the T568A or T568B standard, then use patch cables to link the panel to your network switch or devices, ensuring proper labeling and cable management.

Step 1: Mount the Patch Panel

Secure the patch panel in your rack or wall-mounted information box using cabinet screws. Ensure it is positioned for easy access to both the front ports and rear cable terminations .

Step 2: Prepare the Cables

Run the network cables from wall jacks or other termination points to the patch panel. Leave enough slack for easy handling. Strip about 1-2 inches of the outer jacket from each cable without damaging the internal wires .

Step 3: Arrange and Terminate Wires

Separate the individual colored wires and arrange them according to the chosen wiring standard (T568A or T568B). Consistency is crucial across the network. Use a punch-down tool to firmly press each wire into the corresponding slot on the patch panel, which simultaneously trims excess wire . For keystone jack modules, insert t...
