

How to enable UPnP on an optical switch

Overview

Toggle “Enable UPnP” You'll see a switch labeled Enable UPnP. Enable “Allow UPnP Port Mapping” (optional) This lets internal devices open ports as needed. Click Apply Don't forget this part. Changes. This page covers what UPnP is, its benefits and security considerations, and how to enable or disable it on TP-Link routers, Deco, and modem routers, along with troubleshooting tips if your UPnP-enabled device isn't working. Universal Plug and Play (UPnP) allows devices on your network to. To enable UPnP on your router, the first step is to log in to the router's web interface. To access the web interface, you will need the router's IP address, which is usually printed on the router itself or provided in the. Changing the UPnP setting takes only a few minutes and requires nothing more than a browser and your router's admin password. Find your router's IP address — Open a command prompt or terminal and type ipconfig (Windows) or ip route (Linux/Mac). UPnP can be convenient, but it also has security implications.
