

# How to find fiber optic cables when opening a skylight

## Overview

Fiber optics are harder to find. They don't carry electricity, so special tools like ground-penetrating radar (GPR) are needed to locate them. Whether it's a small fence or a big construction job, knowing where underground utilities are saves time. Damaging fiber optic cables, gas lines, or water pipes can cause costly repairs and safety risks. Public utility marks aren't enough. Free services like 811 only mark public utilities, not private lines like septic systems or private fiber optic cables. They are preferred over traditional copper cables due to their higher bandwidth and faster speeds. These cables can be routed. Installing fiber optics in your home or your business involves creating a blueprint for the place and planning how it will be built your cable. Outdoor cable may be direct buried, pulled or blown into conduit or innerduct, or installed aerially between poles.
