

How to install a pole-mounted optical distribution box

Article Overview

Pole-mounted optical distribution boxes (PBOs) are installed using dedicated mounting brackets, lag screws or bolts, and proper cable management to ensure secure, safe, and organized fiber distribution.

Mounting the Box

- **Select the Pole and Position:** Choose a standard wood or telecommunication pole with sufficient clearance from power lines and obstructions. Ensure the pole is structurally sound to support the weight of the PBO and fiber cables .
- **Attach Mounting Brackets:** Use the pole-mount kit provided with the PBO. Typically, this includes brackets that are secured to the pole using lag screws or bolts. For example, two 3/4-inch bolts and four 1/2 x 2-inch lag screws are commonly required, though the exact hardware may vary by manufacturer .
- **Secure the Box:** Place the PBO onto the brackets and fasten it using the supplied hardware. Ensure the box is level and firmly attached to prevent movement or vibration that could damage fiber connections .
- **Optional Hoop or Strap Fixing:** Some enclosures use a hoop ring or strap through slots on the back plate to secure the box to the pole, providing additional stability .

Cable Management

- **Feeder Cable Entry:** Feed the main distribution cable through the designated ports. These ports are designed to maintain structural integrity and allow loop-through configurations for flexible deployment .
- **Splicing and Patch Areas:** Separate the splicing area from the drop cable patch ar...
