

How to install rails inside the distribution box

Article Overview

Installing guide rails on a distribution box requires careful alignment, secure mounting, and proper surface preparation to ensure safety and functionality.

Step 1: Plan and Inspect

Before installation, sketch the layout of the guide rails, noting the path, intersections, and any turns. Ensure the rails are compatible with the distribution box and any additional components like DIN rails or cable management channels. Inspect all guide rail components and hardware for defects and confirm that all parts are present to avoid interruptions during installation .

Step 2: Prepare the Mounting Surface

The surface where the guide rails will be mounted must be clean, level, and sturdy. Remove rust, dust, or debris, and if necessary, apply a primer or protective coating to prevent corrosion. For concrete floors, use the provided anchors; for other surfaces, select fasteners suitable for the material and expected load .

Step 3: Mark and Drill

Place the guide rail in its intended position and use the mounting holes as a template to mark the drilling points. For concrete, drill holes approximately 3/8" in diameter and 2" deep for the anchors. For vertical mounting surfaces, use the included screw...
