

How to remove the fiber optic cable from the cold connector

Article Overview

To remove a fiber optic cold connector, identify the connector type, disengage its latch or locking mechanism, gently pull the connector body (not the cable), and immediately clean and protect the fiber end.

Step-by-Step Removal

1. Prepare the Workspace Ensure the area is clean and free of dust or debris. Turn off any connected equipment to prevent active signal transmission and potential eye hazards from laser light. Wear anti-static gloves to avoid contaminating the fiber ends with oils or dirt . 2. Identify the Connector Type Common fiber optic connectors include LC (push-and-latch), SC (snap-in), ST (bayonet twist), and MPO/MTP (multi-fiber push-on/pull-off). Knowing the type is essential because each has a different removal mechanism . 3. Disengage the Connector

- LC Connectors: Press the latch mechanism and gently pull the connector straight out.
 - SC Connectors: Grip the connector body (not the cable) and pull straight out.
 - ST Connectors: Twist the bayonet coupling counterclockwise, then pull out.
 - MPO/MTP Connectors: Press the release tabs on the sides and carefully pull the connector .
4. Avoid Excessive Force Never yank or twist the connector if it resists removal. Check for hidden latches or locking mechanisms that may need to be disengaged. Forcing the connector can damage both the fiber and the equipment port . 5. Clean and Protect the Fiber End Immediately after removal, use a fiber opti...
