

How to use Huawei Virtual Terminal Box

Article Overview

Huawei Virtual Terminal Box can be used by installing VirtualBox, setting up a Huawei Cloud Stack or eNSP virtual machine, and managing devices through the GUI or cloud interface.

Prerequisites

- Enable CPU Virtualization: Access your PC BIOS and enable Intel Virtualization Technology or AMD-V under Security or Configuration settings .
- System Requirements: A 64-bit OS (Windows recommended), at least 4 GB RAM, and a dual-core processor .
- Network Drivers: Download and install the NIC driver matching your OS (e.g., Intel PROWinx64.exe for Windows 10), .

Installing VirtualBox

- Download VirtualBox from the official site and run the installer as Administrator .
- Choose installation path and default settings, then complete the installation.
- VirtualBox will serve as the virtualization platform for Huawei VMs or eNSP devices .

Setting Up Huawei Virtual Terminal Box

Option 1: Huawei Cloud Stack VM

- Decompress the Huawei Cloud Stack Deploy scripts and ISO file to a local directory .
- Open PowerShell as Administrator and run the deployment scripts.
- VirtualBox will create a bare-metal VM for Huawei Cloud Stack.
- Configure virtual hardware such as CPU, memory, and network adapters as prompted
