

How to wire a remote temperature control distribution box

Article Overview

Wiring a remote temperature control distribution box involves connecting RTD or thermocouple sensors to a temperature transmitter, then linking the transmitter to the remote control unit using proper terminals, polarity, and grounding practices.

Step 1: Prepare the Components

- **Temperature Sensor:** Use an RTD (e.g., Pt100) or thermocouple suitable for your application .
- **Temperature Transmitter:** Converts the sensor signal to a standard 4-20 mA output for long-distance transmission .
- **Remote Control Unit:** Receives the signal and allows temperature monitoring or control .
- **Wiring Materials:** Two-core or multi-core insulated wires (≥ 1 mm thickness), terminal blocks, screws, and cable clamps .

Step 2: Connect the Sensor to the Transmitter

- Identify the positive, negative, and reference leads of the RTD: red ('+'), white ('-'), and green ('R') for a 3-wire Pt100 .
- For a 2-wire RTD, connect the two leads to the transmitter's input terminals. For a 3-wire RTD, connect the positive, negative, and reference leads according to the transmitter's manual .
- Ensure all connections are secure to prevent signal errors....
