

Installation Dimensions of 15-Channel Distribution Box

Article Overview

A typical 15-channel distribution box measures approximately 600 mm (height) × 400 mm (width) × 150 mm (depth), suitable for DIN rail-mounted MCBs and flush or surface installation.

General Dimensions and Mounting

Most 15-way distribution boxes are designed to accommodate fifteen miniature circuit breakers (MCBs) on standard DIN rails. The typical external dimensions for such boxes are around 600 mm in height, 400 mm in width, and 150 mm in depth, though exact measurements may vary slightly depending on the manufacturer and model . These boxes are available in flush mount or surface mount configurations, allowing flexibility for indoor installations where aesthetics and accessibility are important .

Internal Layout and Clearance

The internal layout is designed to provide sufficient spacing for wiring, terminals, and circuit breakers. Adequate depth is critical to ensure proper wire fill, safe conductor bending, and ease of maintenance . Most 15-way boxes include DIN rails for modular MCB installation, and the spacing between rails and the enclosure walls is typically optimized for standard wire gauges and terminal connections .
