

# Installation Method for Incoming Wiring of Distribution Box

## Article Overview

Incoming wiring to a distribution box typically uses a five-wire system with three-phase lines, a neutral line, and a ground wire, connected to the main switch or circuit breaker.

### Incoming Wiring Overview

The incoming line is the critical link between the main power supply and the distribution box. Proper installation ensures safe and efficient power distribution throughout the building . The standard method uses a five-wire system:

- Three Phase Lines (A, B, C): Usually color-coded yellow, green, and red. These carry the main electrical current and form the three-phase power system for heavy loads .
- Neutral Line: Typically light blue, serving as the return path for unbalanced loads and maintaining system stability .
- Ground Wire: Yellow-green striped, providing a safety path to earth in case of faults .

### Connection to the Distribution Box

- Main Switch or Circuit Breaker: The incoming phase lines are connected to the main air switch, circuit breaker, or knife switch. This acts as the primary control and protection for the entire distribution system .
- Neutral Terminal Block: The neutral wire is pressed or connected to the neutral bus bar to distribute the return path to all circuits ....
