

Installation of Optical Modules for Switches

Article Overview

Optical modules should be installed carefully with ESD protection, correct orientation, and dust plug management to ensure reliable network connectivity and prevent hardware damage.

Preparation and Safety

Before installing an optical module, wear an ESD wrist strap or ESD gloves and ensure proper grounding to prevent electrostatic discharge, which can damage sensitive components . Keep dust plugs on unused ports and on the optical module until ready to connect fibers . Never look directly into the optical module or fiber ends, as they emit laser radiation that can harm your eyes .

Installing the Optical Module

- Remove the dust plug from the switch port and keep it for future use .
- Check the module orientation: SFP modules typically have a keyed design; QSFP modules may have a top side with an L-shaped recess that must face correctly depending on the port type .
- Insert the module gently into the port until you hear a click, indicating it is securely seated . Do not force the module; if it does not fit, rotate it 180 degrees and try again .
- Verify installation by gently pulling on the module handle; if it does not come out, it is properly seated
