

KVM switcher to remove sound

Article Overview

Disabling the KVM switch beep depends on the model; some allow muting via hotkeys or auto-scan settings, while others cannot be fully silenced.

Using Hotkeys

For many KVM switches, especially TESmart models, you can disable the beep when switching ports using a keyboard hotkey sequence. Typically, this involves pressing Scroll Lock twice followed by F11 while a keyboard is connected to the designated keyboard port. Note that some keyboards, particularly gaming or multimedia keyboards, may not work correctly with this sequence, so using a standard or older keyboard may be necessary .

Auto-Scan Mode Settings

Some KVM switches, like those from PLANET Technology, allow you to disable the beeper sound only during Auto-Scan mode. After disabling, the KVM will not beep when automatically cycling through ports, but manual switching via keyboard or buttons will still produce a beep .

Limitations

Certain KVM models, such as some StarTech switches, do not allow the beep to be disabled entirely. The beeps serve as confirmation for hotkey commands and cannot be turned off. In these cases, the only workaround is to position the KVM out of earshot
