

Ladder-type tray trough-type cable trays

Article Overview

Ladder-type, trough-type, and solid-bottom cable trays are designed to support and organize electrical cables, each offering distinct advantages in ventilation, load capacity, and cable protection.

Ladder-Type Cable Trays

Design: Ladder trays consist of two longitudinal side rails connected by evenly spaced rungs, resembling a ladder . Advantages:

- Excellent ventilation for heat dissipation, preventing cable overheating.
- High load-bearing capacity, suitable for heavy-duty power cables.
- Easy cable fastening and maintenance due to open design. Applications: Power plants, substations, industrial facilities, and outdoor installations . Notes: Ladder trays are the most commonly used type, accounting for about 75% of installations, and are ideal for single conductor and Type MV cables .

Trough-Type (Ventilated) Cable Trays

Design: Trough-type trays have a solid bottom with regularly spaced ventilation holes and continuous side rails . Advantages:

- Provides continuous support for cables while allowing moderate airflow.
- Reduces mechanical stress on small-diameter cables.
- Suitable for mixed cable systems where some ventilation is needed. Applications: Control rooms, commercial buildings, and installations with instrumentation or com...
