

Lc duplex patch cord to aggregation switch

Article Overview

LC duplex patch cords are used to connect network devices, such as aggregation switches, via SFP or SFP+ ports, providing reliable two-way fiber communication.

LC Duplex Patch Cord Overview

An LC duplex patch cord consists of two fibers in a single connector housing, one for transmit (Tx) and one for receive (Rx), enabling full-duplex communication. The LC connector uses a 1.25 mm ferrule, smaller than SC connectors, and is compatible with most SFP, SFP+, and SFP28 transceivers commonly found in aggregation switches. Duplex LC cables are available in single-mode (SMF) and multimode (MMF) variants, with UPC (flat polish) or APC (angled polish) options depending on reflection sensitivity requirements.

Connecting to an Aggregation Switch

- **Check the SFP Module:** Aggregation switches typically use SFP or SFP+ modules with LC duplex ports. Ensure the SFP module matches the fiber type (single-mode or multimode) and wavelength of your patch cord.
- **Polarity and Duplex Orientation:** LC duplex cables have two fibers; one must connect Tx to Rx on the switch and vice versa on the other device. Some cables are polarity-reversible to simplify this process.
- **Patch Panel Integration:** In high-density environments, LC duplex patch cords often connect from a patch panel to the switch, allowing organized and scalable deployment. Cisco and other vendors support high-density LC patch panels with up...
