

MPO Fiber Optic Patch Cord Solution

Article Overview

An MPO fiber optic patch cord is a high-density, multi-fiber cable terminated with MPO connectors, enabling rapid, efficient connections in modern data centers and high-speed networks.

Overview

An MPO (Multi-fiber Push-On) patch cord is a fiber optic cable terminated on both ends with MPO connectors, designed to carry multiple optical fibers within a single rectangular ferrule, typically 8, 12, 16, 24, or 32 fibers . This design allows for high-density connections, reducing cable bulk and installation time compared to traditional single- or duplex-fiber connectors like LC or SC . MPO connectors are standardized under IEC 61754-7, while MTP® is a branded variant offering enhanced mechanical and optical performance .

Structure

MPO patch cords consist of:

- MPO Connector: Rectangular pluggable connector housing multiple fibers, often 12-core or 24-core .
- Fiber Optic Cable: Ribbon or bundled fiber with protective jacket.
- Strain Relief Components: Prevent excessive bending and fiber damage at the connector tail .
