

Method for removing fiber optic cable pigtails

Overview

Some methods factory make the connector with a fiber stub which is spliced to the fiber for termination. However, either epoxy or anaerobic adhesives followed by polishing have been determined to be the best methods. Executive Summary: A fiber optic pigtail is one of the most commonly specified yet least understood components in structured cabling. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a. Knowing how to terminate fiber optic cable is one of those skills that separates a clean, reliable network installation from one that causes headaches for years. " Each of these methods has several advantages as well as some disadvantages. These terminations must be of the right style, installed in a. Fiber optic joints or terminations - where cables are terminated - are made two ways: 1) connectors that mate two fibers to create a temporary joint and/or connect the fiber to a piece of network gear (left) or 2) splices which create a permanent joint between the two fibers (right).
