

NVR connection to core switch

Article Overview

To connect an NVR to a core switch, use Ethernet or optical cables depending on your NVR type, ensure proper PoE support if needed, and configure IP settings for stable network integration.

Step 1: Determine NVR and Switch Type

- **PoE NVR:** If your NVR supports PoE, it can power IP cameras directly through the switch. Use a PoE-compatible switch to connect cameras and the NVR for centralized power and data transmission .
- **Non-PoE NVR:** Requires an external PoE switch or power adapters for cameras. Connect the NVR to the switch via Ethernet to integrate it into the network .

Step 2: Cabling

- **Ethernet Connection:** Use Cat6 or higher Ethernet cables to connect the NVR to the core switch. This ensures high-speed, stable data transmission .
- **Optical Connection:** For high-capacity setups or long distances, use optical cables with transceivers to link the NVR to the switch. Some systems, like Avigilon Video Archive, require multiple optical cables to connect NVR controllers to uplink ports on the switch .

Step 3: Network Configuration

- **IP Addressing:** Assign static IP addresses to the NVR and cameras to prevent conflicts and ensure stable connections
