

National Standard Waterproof Casing for Distribution Boxes

Article Overview

Waterproof distribution boxes with IP65 or higher ratings protect electrical components from dust, water, and UV exposure, meeting national and international standards for safe outdoor and industrial use.

Key Features

Ingress Protection (IP) Rating: National standard waterproof casings typically comply with IP65–IP68, as defined by IEC 60529. An IP65 rating ensures the enclosure is dust-tight and protected against low-pressure water jets, making it suitable for both indoor and outdoor applications. Higher ratings like IP66 or IP68 provide additional protection against stronger water jets or temporary submersion . **Materials:** Common materials include ABS, polycarbonate, fiberglass-reinforced polyester, aluminum, and steel. Plastic enclosures are lightweight and UV-stabilized for sun-exposed installations, while metal options offer enhanced mechanical strength . **Sealing and Reliability:** Watertight gaskets and compression seals maintain protection even after repeated openings. This ensures long-term reliability for terminals, splices, and miniature modules . **Design Options:**

- **DIN Rail Compatibility:** Many enclosures support DIN rail mounting for modular electrical components.
- **Size Variations:** Compact models (e.g., AT Series) are ideal for tight spaces, while larger models (e.g., HT Series) allow cleaner routing and more terminals .
- **Customizable Layouts:** Some manufacturers offer tailored builds for specific applic...
