

Network signal only available after rack restart

Overview

If STP is disabled, enable it and restart the switch. ☐ Soft Reset (Without Losing Configurations): `nginx CopyEdit reload` ☐ Factory Reset (Erase All. In other words, whenever I turn on my PC I have to reboot it to get the network card to show up and internet to work. If I do not do that, my network card does not show up in the Device Manager at all. 19042 Build 19042 My network card. A switch failure can result from several issues, including: ☐ Power Supply Issues – Switch not powering on or experiencing power fluctuations. ☐ Faulty Ports or Cables – Damaged Ethernet cables or non-functional ports. The Switch is 28 port TPlink small business switch with RST configured. BUT we are also losing connectivity to other parts of the rack which runs a the home automation. We are. just installed x86 x64 rack, losing internet connection after hours of use, restart is the only solution what could i do?

what could i do?

Post the log?

Post the log?

where is the log?

`cat /etc/log?`

let's start by reviewing your configuration: Remember to redact passwords, MAC addresses and any. The system does not recognize the network card at the first boo...
