

New Ecuadorian High Voltage Complete Set of Equipment

Article Overview

Ecuador has recently upgraded its high-voltage infrastructure with complete sets of transmission line materials, advanced transformers, and smart maintenance equipment to enhance grid reliability and efficiency.

Transmission Line and Substation Projects

In July 2024, DINGLI completed the supply of a complete set of 69kV transmission line materials in Ecuador, including cables, composite insulators, and power fittings, marking a significant step in modernizing the local power grid and establishing a strong presence in the Ecuadorian market . Additionally, CMEC has developed a 230/138/69kV power transmission and transformation system, including two substations and 80 kilometers of high-voltage lines, overcoming complex terrain and climatic conditions to ensure reliable electricity delivery from La Congaldia City to Pedernales City . This project also introduced Ecuador's first unattended intelligent substation, remotely monitored from Quito, enhancing operational efficiency and grid stability .

High-Voltage Transformers and Equipment

Ecuador maintains a robust network of high-voltage transformers, with 64 suppliers actively exporting equipment to meet domestic and international demand . These transformers are critical for stepping up and stepping down voltage across the transmission network, supporting both urban and rural electricity distribution....
